Table of Contents

Overview

A. Purpose

The CFI Publication 100 is a companion document to the Common Flash Interface (CFI) specification, which outlines device and host system software interrogation handshake. CFI Publication 100 documents ID Code assignments for: 1) the Vendor-specific Command Set and Control Interfaces and 2) the Device Interfaces. It is published as needed when additions are made to either of these lists of codes.

B. Scope

The Vendor Command Set and Control Interface ID codes listed in CFI Publication 100 are assigned to each unique manufacturers' interfaces upon request to the CFI Program Office. Any number of different interfaces may be thus identified by a single vendor or association of vendors. It is up to those manufacturers to provide the detailed specifications for each identified interface. Similarly, new device interface codes will be assigned as needed as new devices employing the Common Flash Interface Query scheme are identified. CFI Publication 100 also provides examples of Query data output for pre-CFI devices as provided by participating vendors; these represent the appropriate data for the specifications and geometry of these devices as they would appear in the Query structure if the Query mode were available for them.

Section 1.
Vendor Command Set & Control Interface ID Code Assignments

Hex Value	Integer Value	OEM Sponsor	Interface Name
0000	0	Null	e.g. when no Alternate Vendor Command Set and Control Interface is specified
0001	1	Intel/Sharp	Intel/Sharp Extended Command Set
0002	2	AMD/Fujitsu	AMD/Fujitsu Standard Command Set
0003	3	Intel	Intel Standard Command Set
0004	4	AMD/Fujitsu	AMD/Fujitsu Extended Command Set
0100	256	Mitsubishi	Mitsubishi Standard Command Set
0101	257	Mitsubishi	Mitsubishi Extended Command Set
FFFF	65,535	N/A	Not Allowed / Reserved for Future Use

Section 2.
Device Interface Code Assignments

Hex Value	Integer Value	Interface Name
0000	0	x8-only asynchronous interface
0001	1	x16-only asynchronous interface
0002	2	supports x8 and x16 via BYTE# with asynchronous interface
0003	3	x32-only asynchronous interface
FFFF	65,535	Not Allowed / Reserved for Future Use

Appendix

Appendix A. Query Structure Examples

The following tables represent example data for Query structures of existing devices which were in volume production prior to publication of the CFI specification. Thus these data would be the correct CFI parameters if the CFI Query mode were present today or if this mode were added to future versions of such devices. Lacking Query output from the devices, the current system software may embed these data to support both future CFI-compliant devices and current pre-CFI devices.

CFI Query Identification String

Offset	Length (bytes)	Description	Example Data Intel 28F008SC x8-only device	Example Data AMD/Fujitsu 29F016 x8-only device	Example Data Intel 28F800BVT x16 device/mode	Example Data AMD/Fujitsu 29LV008 x16 device/mode	Example Data Intel 28F016SV x16 device/mode
10h	03h	Query-unique ASCII string "QRY"	10: 51h 11: 52h 12: 59h	10: 51h 11: 52h 12: 59h	10: 0051h 11: 0052h 12: 0059h	10: 0051h 11: 0052h 12: 0059h	10: 0051h 11: 0052h 12: 0059h
13h	02h	Primary Vendor Command Set and Control Interface ID Code 16-bit ID code for vendor-specified algorithms	13: 03h 14: 00h	13: 02h 14: 00h	13: 0003h 14: 0000h	13: 0002h 14: 0000h	13: 0003h 14: 0000h
15h	02h	Address for Primary Algorithm extended Query table Offset value = ***P*** >= 31h	15: 32h 16: 00h	15: 40h 16: 00h	15: 003Eh 16: 0000h	15: 0040h 16: 0000h	15: 0032h 16: 0000h
17h	02h	Alternate Vendor Command Set and Control Interface ID Code second vendor-specified algorithm supported Note: ID Code = 0000h means none exists	17: 00h 18: 00h	17: 00h 18: 00h	17: 0000h 18: 0000h	17: 0000h 18: 0000h	17: 0000h 18: 0000h
19h	02h	Address for Secondary Algorithm extended Query table Note: Address 0000h means none exists	19: 00h 20: 00h	19: 00h 20: 00h	19: 0000h 20: 0000h	19: 0000h 20: 0000h	19: 0000h 20: 0000h

Offset	Length (bytes)	Description	Example Data Intel 28F008SC x8-only device	Example Data AMD/Fujitsu 29F016 x8-only device	Example Data Intel 28F800BVT x16 device/mode	Example Data AMD/Fujitsu 29LV008 x16 device/mode	Example Data Intel 28F016SV x16 device/mode
